

# ROBOR Electronics introduces the GSM - Birth Alert

*with "Advanced Contraction Analyzer"*

Many people are already familiar with the advantages of the new GSM BirthAlert systems from ROBOR Electronics. The GSM BirthAlert system saves you from many sleepless nights. You simply get a call from the mare when she starts giving birth. It is a system that keeps you mobile, You don't need to stay continuously at home to hear the signal from a receiver, because you're carrying the receiver with you: Your mobile phone! Thanks to Cellular phone techniques there is no distance-limit between you and the mare anymore.

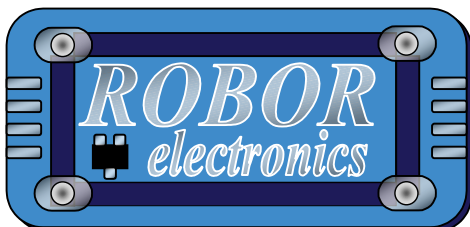

The new BirthAlert systems use a brand new detection method and advanced software. This gives you the possibility to modify settings like the detection angle, phone numbers and the advanced contraction-analyzer (ACA) -function remotely from your own cellphone by SMS. The ACA-function avoids unnecessary calls when the mare is sleeping completely stretched. Additionally the BirthAlert system can send SMS-reports with information about GSM-signal strength, battery condition, The measured angle, detection angle and ACA-function.

## *The Belt-BirthAlert models*

- ▶ As soon as your mare starts having contractions, you'll receive a call from the BirthAlert system on your phone. The system can call 4 numbers sequentially.
- ▶ The GSM - BirthAlert is waterproof and so perfectly suitable for using outdoors.
- ▶ There is a model available for every horse, there are three different models.
- ▶ Remote configurable by your own cellphone.
- ▶ Expandable with one or more Slave-BirthAlerts.

## *The Halter-BirthAlert*

**The most compact BirthAlert on earth!!**

- ▶ The Halter BirthAlert functions in the same way as the Belt-BirthAlert system, but this tiny little box fits directly to every halter. Therefore it is suitable for every kind of horse. The mare can keep wearing her own halter she is used to.
- ▶ The Halter-BirthAlert is ultra light weight and compact.
- ▶ Unlike other Halter systems this BirthAlert produces never false-notifications when a mare simply eats, drinks or grazes.
- ▶ Remote configurable by your own cellphone.
- ▶ Expandable with one or more Slave-BirthAlerts.

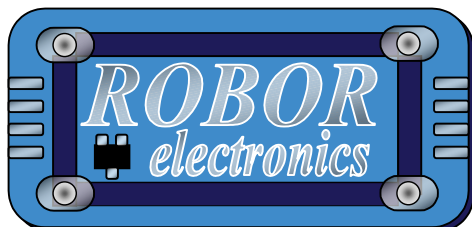

## *Additional products to expand your BirthAlert system:*

### *The Slave-BirthAlert*

The Slave-BirthAlert is a very tiny little BirthAlert system with dimensions of a match box, which can be used in addition with a normal GSM BirthAlert, to expand the system for two or more mares. When a mare with a Slave BirthAlert is going to give birth, the slave BirthAlert sends it's signal to you, using the nearby GSM BirthAlert. This way you can watch over more mares at the same time. With only one GSM BirthAlert system.
